On the cover: Regulatory CD3+ (green) FoxP3+ (red) T cells in CXCL10-deficient intact pancreatic islet isografts on day 100 after engraftment. CXCL10 influences the autoimmune destruction of islet isografts in mice with type 1 diabetes. A markedly increased number of regulatory T cells was detected surrounding the islet isografts under the kidney capsule of nondiabetic mice. Her article, "Islet-Expressed CXCL10 Promotes Autoimmune Destruction of Islet Isografts in Mice With Type 1 Diabetes," appears in this issue of *Diabetes* (p. 113).
