*On the cover:* The seventeenth century engraving of Scylla and Charybdis by Matthäus Merian the Elder. Scylla and Charybdis is an idiom from Greek mythology meaning “between a rock and a hard place.” (A in the engraving represents Scylla, and B is Charybdis.) This issue of *Diabetes* features a Commentary by Mitchell and Marette, “Statin-Induced Insulin Resistance Through Inflammasome Activation: Sailing Between Scylla and Charybdis” (p. 3569).

*Correction:* The September 2014 cover caption was incorrect. The caption should read: Differential interference contrast immunofluorescence image of a section through a rat pancreatic islet showing hormone-producing cells. The  $\alpha$ -cells producing glucagon are labeled in red, and the  $\beta$ -cells producing insulin are in green. Image by Michelle B. Trevino, graduate student enrolled in the 2013 Immunohistochemistry and Microscopy Course at the Marine Biological Laboratory in Woods Hole, MA.
