LETTER TO THE EDITOR

1363 The Integrated Islet Distribution Program Answers the Call for Improved Human Islet Phenotyping and Reporting of Human Islet Characteristics in Research Articles

PERSPECTIVES IN DIABETES

1366 Standardizing T-Cell Biomarkers in Type 1 Diabetes: Challenges and Recent Advances

1380 Navigating the Depths and Avoiding the Shallows of Pancreatic Islet Cell Transcriptomes
A.M. Mawla and M.O. Huising

METHODOLOGY REVIEW

1394 NIH Initiative to Improve Understanding of the Pancreas, Islet, and Autoimmunity in Type 1 Diabetes: The Human Pancreas Analysis Program (HPAP)
K.H. Kaestner, A.C. Powers, A. Naji, HPAP Consortium, and M.A. Atkinson

METABOLISM

1403 Modified UCN2 Peptide Acts as an Insulin Sensitizer in Skeletal Muscle of Obese Mice

1415 Microbiota-Produced N-Formyl Peptide fMLF Promotes Obesity-Induced Glucose Intolerance

1427 AMPK and TBC1D1 Regulate Muscle Glucose Uptake After, but Not During, Exercise and Contraction

1441 Statins Promote Interleukin-1β-Dependent Adipocyte Insulin Resistance Through Lower Prenylation, Not Cholesterol

OBESITY STUDIES

1449 SIRT5 Regulates Brown Adipocyte Differentiation and Browning of Subcutaneous White Adipose Tissue

ISLET STUDIES

1462 Central and Peripheral Administration of Fibroblast Growth Factor 1 Improves Pancreatic Islet Insulin Secretion in Diabetic Mouse Models
K.G. Tennant, S.R. Lindley, M.A. Kirigiti, C. True, and P. Kievet

IMMUNOLOGY AND TRANSPLANTATION

1473 Constitutive Activation of β-Catenin in Conventional Dendritic Cells Increases the Insulin Reserve to Ameliorate the Development of Type 2 Diabetes in Mice

COMPLICATIONS

1485 LRNA9884, a Novel Smad3-Dependent Long Noncoding RNA, Promotes Diabetic Kidney Injury in db/db Mice via Enhancing MCP-1–Dependent Renal Inflammation

PHARMACOLOGY AND THERAPEUTICS

1499 Topical Fluoxetine as a Novel Therapeutic That Improves Wound Healing in Diabetic Mice

GENETICS/GENOMES/PROTEOMICS/METABOLOMICS

1508 Genetic Regulation of Enoyl-CoA Hydratase Domain-Containing 3 in Adipose Tissue Determines Insulin Sensitivity in African Americans and Europeans

Genetic Variation Within the HLA-DRA1 Gene Modulates Susceptibility to Type 1 Diabetes in HLA-DR3 Homozygotes

Trisomy 21 Is a Cause of Permanent Neonatal Diabetes That Is Autoimmune but Not HLA Associated

ERRATUM
Erratum. hZnT8 (Slc30a8) Transgenic Mice That Overexpress the R325W Polymorph Have Reduced Islet Zn²⁺ and Proinsulin Levels, Increased Glucose Tolerance After a High-Fat Diet, and Altered Levels of Pancreatic Zinc Binding Proteins. Diabetes 2017;66:551–559
L. Li, S. Bai, and C.T. Sheline

On the cover: A novel long noncoding RNA, LRNA9884, is markedly induced in the diabetic injured kidney of 20-week-old db/db mice, which was visualized by fluorescence in situ hybridization (red) counterstaining with epithelial cell marker (keratin, green) and nucleus (DAPI, blue). Image courtesy of Ying-ying Zhang, Patrick Ming-Kuen Tang, and Hui-Yao Lan: Department of Medicine & Therapeutics, Li Ka Shing Institute of Health Sciences, and Lui Che Woo Institute of Innovative Medicine, Shenzhen Research Institute, The Chinese University of Hong Kong, Hong Kong (Y.-y.Z., P.M.-K.T., H.-Y.L.); Department of Nephrology, Tongji Hospital, Tongji University School of Medicine, Shanghai, China (Y.-y.Z.); and Department of Anatomical and Cellular Pathology, State Key Laboratory of Translational Oncology, Prince of Wales Hospital, The Chinese University of Hong Kong, Hong Kong (P.M.-K.T.). Their article, “LRNA9884, a Novel Smad3-Dependent Long Noncoding RNA, Promotes Diabetic Kidney Injury in db/db Mice via Enhancing MCP-1–Dependent Renal Inflammation,” appears in this issue of Diabetes (p. 1485).
