Association of Baseline Hyperglycemia With Outcomes of Patients With and Without Diabetes With Acute Ischemic Stroke Treated With Intravenous Thrombolysis: A Propensity Score–Matched Analysis From the SITS-ISTR Registry

On the cover: This homage to Jackson Pollock shows a layered snapshot of the predicted three-dimensional structural models for the native and variant IA-2 protein. In this issue of Diabetes, Acevedo-Calado et al. show that antibodies to the variant IA-2 protein are associated with a high risk of type 1 diabetes progression in their article, “Autoantibodies Directed Toward a Novel IA-2 Variant Protein Enhance Prediction of Type 1 Diabetes” (p. 1819).
