On the cover: Three-dimensional confocal microscopic image of pancreatic tissue from a human donor. Islets are stained with a pan-endocrine antibody marker (HPi1, cyan). Capillaries are stained with an endothelial cell marker (CD31, red). Arterioles are indicated by α -smooth muscle actin staining (α -SMA, blue). Image courtesy of Bryce K. Hendren-Santiago, Michael P. Dybala, and Manami Hara, Department of Medicine, The University of Chicago, Chicago, IL.
