

SUPPLEMENTARY DATA

Supplementary Figure 1. NOD.Ncf1m1J CD8+ T cells fail to exhibit a respiratory burst after polyclonal stimulation. Purified splenic CD8+ T cells were stimulated with anti-CD3 and anti-Ig cross-linking for 30 minutes. ROS production was detected by flow cytometry as the increase in fluorescence resulting from the oxidation of CM-H2DCFDA. The histogram is a representative plot from a total of 4 mice per genotype.
